

AI Interview Assistant

Complete Setup Guide · v2.0

- ✓ Silent listener — no audio output, text only
- ✓ Upload your resume for personalized answers
- ✓ Paste or upload Job Description for role-specific context
- ✓ Add special instructions to control how AI responds
- ✓ Works on Android Chrome — place phone near laptop speaker

STEP 1 — Get Your Anthropic API Key

The app uses Claude AI (by Anthropic) to generate answers. You need an API key.

- 1 Open console.anthropic.com in your browser**
Sign in or create a free account
- 2 Click 'API Keys' in the left sidebar**
- 3 Click 'Create Key' — give it any name**
e.g. "Interview App"
- 4 Copy the key — it starts with sk-ant-...**
Save it somewhere safe, you won't see it again

■ Free tier gives you enough credits to run hundreds of interview sessions.

Paid usage is very cheap — roughly \$0.01 per 10 questions answered.

STEP 2 — Install Node.js on Your Computer

Node.js is needed to run the app locally. You only install this once.

- 1 Go to nodejs.org**
Click the green LTS button to download

2**Run the installer**

Click Next → Next → Install (all defaults are fine)

3**Open Terminal / Command Prompt**

Windows: press Win+R, type cmd, press Enter Mac: press Cmd+Space, type Terminal

4**Verify installation**

Type: node --version and press Enter You should see something like: v20.x.x

STEP 3 — Add Your API Key to the App

Open the file: ai-interview-assistant/src/App.jsx in any text editor (Notepad, VS Code, etc.)

Find this line (use Ctrl+F to search):

```
"Content-Type": "application/json",
```

Add this line directly below it:

```
"x-anthropic-api-key": "sk-ant-YOUR-KEY-HERE",
```

Example — what it should look like after editing:

```
headers: {  
  
  "Content-Type": "application/json",  
  
  "x-anthropic-api-key": "sk-ant-api03-abc123...xyz",  
  
},
```

Save the file after editing (Ctrl+S).

STEP 4 — Run the App

1**Open Terminal / Command Prompt****2****Navigate to the app folder**

Type: cd path/to/ai-interview-assistant Then press Enter

3**Install dependencies (first time only)**

Type: npm install and press Enter Wait 1-2 minutes for it to finish

4**Start the app**

Type: npm start and press Enter A browser will open automatically at localhost:3000

STEP 5 — Open on Your Phone

Your phone and computer must be on the SAME Wi-Fi network.

- 1 Find your computer's local IP address**
Windows: open cmd → type ipconfig → look for IPv4 Address Mac: System Settings → Wi-Fi → Details → IP Address Example: 192.168.1.5
- 2 Open Chrome on your Android phone**
Chrome is required for microphone/speech API
- 3 Type the address in Chrome**
Example: http://192.168.1.5:3000 (Use your actual IP, not this example)
- 4 Allow microphone permission**
Chrome will ask — tap Allow

STEP 6 — Set Up Interview Context (Important!)

Before your interview, add your context so answers are personalized:

- 1 Tap the Document icon (■) in the top-right header**
This opens the Interview Context screen
- 2 Upload your Resume**
Tap 'Upload Resume' → select PDF or screenshot OR paste your resume text directly in the text box
- 3 Add Job Description**
Paste the full JD from LinkedIn/company site OR upload a PDF/screenshot of the JD Include company name, role, requirements
- 4 Add Special Instructions**
Examples: • "Always mention my 3 years of React experience" • "Sound confident and senior-level" • "Keep answers under 2 sentences"
- 5 Tap Save & Start Interview**
Context is now loaded — AI will use it for every answer

STEP 7 — During the Interview

1

Place your phone near the laptop speaker

Face-up, 10-20cm from speaker is ideal

2

Tap 'Start Listening'

Green dot pulses = actively listening

3

Interviewer asks a question

App detects it automatically — no button to tap

4

Read the answer on screen

Answer appears in the blue box within 2-3 seconds

5

New question replaces old answer automatically

Tap 'Clear' anytime to reset screen

■ Tips for best results:

- Use a quiet room — less background noise = better detection
- Keep phone volume on (for mic sensitivity) but phone is silent — no speaker output
- If a question is missed, tap Clear and listen again
- Check History screen after interview to review all Q&As;

Troubleshooting

Problem: Not Supported error

Fix: Use Chrome on Android. Safari and Firefox don't support the Web Speech API.

Problem: App not opening on phone

Fix: Make sure phone and laptop are on the same Wi-Fi. Try turning off laptop firewall temporarily.

Problem: No answers generating

Fix: Check your API key is correctly added to App.jsx. Make sure it starts with sk-ant-

Problem: Questions not being detected

Fix: Speak more clearly near the mic. Go to Settings and try High sensitivity. Make sure the question has a question mark or keyword like 'explain', 'how', 'what'.

Problem: App loads but screen is blank

Fix: Hard refresh: hold Ctrl and press F5 (Windows) or Cmd+Shift+R (Mac).

Problem: Resume/JD not extracting

Fix: File must be a PDF or common image format (JPG, PNG, WEBP). Try pasting text manually if file upload fails.

Built with Claude AI (Anthropic) · React · Web Speech API

For support or questions about the app, check README.md in the project folder.
